

Parts for Order Picker Forklifts

Parts for Order Picker Forklifts - Order preparation operation or likewise called order picking as it is more commonly known is a process utilized in warehouse operations and consists of employees referred to as order pickers. The order picker's job is to collect and take articles in specific quantities in order to fulfill the customer's orders before shipment. Order picking is an easy warehousing process. The effectiveness in which this task is completed could be directly linked to the productivity of a supply chain. Therefore, order picking is amongst the most controlled logistic methods. Order picking falls in the category of the warehouse management system.

There are some specific kinds of order picking. The main types consist of: wave picking method, pick to box method, piece picking or picker to part method, zone picking method and sorting systems method.

The pick to box method comprises the order picker filling the box with the things from his or her station. The box then moves to other picking locations until the client order is done. In this method, there is no movement of the order picker staff. In the wave picking method, the order pickers move round so as to gather the necessary things for several orders. The piece picking or picker to part method is similar where the order pickers or picker move so as to gather the stuff required but for one order only.

In the sorting systems method, there is no movement of the order picking staff. Instead, the products are delivered to him or her via an automated system such as a conveyor system or an automatic storage. In the zone picking method, every order picker is assigned to one particular zone. They are responsible for just realizing order picking within this particular zone.
