

Fork Positioner for Forklift

Fork Positioner for Forklift - A fork positioner is an apparatus constructed out of top quality materials intended to be able to endure the most challenging procedures and work environments. This particular piece of equipment enables drivers to control the forks hydraulically without leaving the seat. Side shifting models have the extra ability to be able to laterally position the entire load or the arms so as to facilitate much more precise lifting and placement in a quicker and much more effective manner.

The unique blade pocket design could enable the one operating it to be able to securely swing the unit's forks without any fear of destroying the positioning cylinders. This could allow the operator the alternative to either perform independent or simultaneous blade movement, dependent upon the requirements of the job. For most lift trucks with non-OEM carriages, complete carriages are necessary. Standard OEM carriages could be converted into blade positioners on available units.
