

Remanufactured Forklift Parts

Remanufactured Forklift Parts - Lift trucks are very pricey pieces of equipment. A 5000lb new electric unit could cost between \$18,000 to \$25,000 and some thousands of dollars more will be needed for a battery and a battery charger. The same internal combustion lift truck of similar lift capacity will cost a little less and the diesel units which are capable of heavier lifting capacities could cost upwards of one hundred thousand dollars. Reconditioned forklifts are an alternative so as to save much money since they cost less than half the price of new units.

Some buyers may be skeptical about buying a used or reconditioned lift truck as they feel they will have to spend more on repairs. However, a correctly reconditioned forklift will be able to run just as well as a new one. Although your lift would get heavy use, so long as you take good care of the machine, it would serve all your needs and likely save you lots of money.

When thinking about buying a second-hand lift truck, it is vital to determine what the seller means by the term refurbished or reconditioned. A lot of companies do an excellent job of absolutely making over the unit previous to reselling it. This includes disassembling the forklift, rebuilding the engine, sandblasting the lift and afterward reassembling the whole thing and finishing with a fresh coat of paint.

To thoroughly rebuild a forklift engine, a good company would initially absolutely disassemble it. A heat cleaning system is then used to clean all of the parts. When this step has been finished, all of the parts are checked to see if they have any breakage, any extensive wear or any defects. Some parts like for instance crankshafts, cylinder blocks, connecting rods and cylinder heads are resized, reground and resurfaced if needed. Other components like for example nuts, bolts, gears etc. are repaired or replaced as considered necessary.

The engine is rebuilt by hand once the overhaul has been accomplished. After putting it back together, a series of tests are applied to the running machinery. This is done to be able to check all of the components to ensure there are no issues or leaks. If any problems occur, the needed alterations are done.

There must be no reason to be apprehensive about obtaining a reconditioned or refurbished forklift from quality sellers. The process of rebuilding the machines ensures the utmost in reliability. Maintenance expenses can actually work out to be less as you will avoid the initial phase of higher upkeep projections which a new lift truck has as it is broken in. By following routine upkeep schedules and taking care of the machinery correctly, a reconditioned forklift will serve you well.
